

## **Background on ChemRem International LLC and Chief Executive Jim Studer**

ChemRem International LLC was founded in 1996 by Mr. Jim Studer as an Arizona Corporation and is the authorized North American manufacturer's representative for FMC Corporation. Operating primarily out of Albuquerque, New Mexico, Jim is chief executive and lead technical sales professional and provides technical support on numerous projects across the United States and Canada and elsewhere. Jim has been intimately involved in every technical sales engagement involving ChemRem and has earned a reputation for detailed and insightful support to ChemRem / FMC customers. FMC views ChemRem as an extension of the FMC Environmental Team and includes ChemRem in product development and testing activities.

Jim obtained a B.S. and M.S. in Geological Engineering from the University of Missouri-Rolla (UMR). The university has been renamed as of 2008 to Missouri University of Science & Technology. He has earned 23 years of professional experience spanning advanced site characterization, conventional and advanced soil and groundwater remediation design and execution, technology development, and dispute-resolution. Jim is a registered professional engineer in numerous states and participates in numerous local to international professional societies and organizations including NGWA/AGWSE, ASCE, AEHS, GRA of California, and others. He is the recipient of academic scholarships and awards, professional society awards and recognitions. He is published in refereed journals, international symposium proceedings, and books and gives platform and poster presentations in many venues.
